**Digital Literacy Project**

**Name:** G.ESWARAPRASAD
**Reg No:** 25MIP10014
**Branch:** Integrated M.Tech (Computational and Data Science)
**Year:** 1st Year
**Course Code:** CSE0001
**Date:** 26 March 2026

---

## 🔹 Introduction

Digital literacy is an essential skill in today's technology-driven world. This project aims to develop practical knowledge of digital tools, online platforms, professional communication, and cyber safety. As a student digital ambassador, the objective was to promote responsible and effective use of digital resources.

The project involves creating an infographic, building a digital portfolio using platforms like GitHub, LinkedIn, and Kaggle, solving coding problems, designing a Google Form for data collection, and studying cybercrime awareness. Through these activities, I gained hands-on experience in managing digital content, communicating professionally, and understanding online risks.

---

## 🔹 Task 1: Infographic Creation

**Objective:**
To visually represent key concepts of digital literacy.

**Work Done:**
An infographic was created using Canva covering:

- Digital literacy fundamentals
- Useful digital tools
- Safe internet practices
- Email etiquette
- Professional online presence

**Tools Used:** Canva

**Learning Outcome:**
This task enhanced my ability to present information visually and improved my understanding of how different aspects of digital literacy are interconnected. One

challenge faced was organizing multiple topics within limited space while maintaining clarity.

---

### 🔹 Task 2: Digital Portfolio Development

**Objective:**
To build a professional online presence.

**Work Done:**
Profiles were created on:

- GitHub (project repository and README)
- LinkedIn (professional profile)
- Kaggle (dataset exploration)

**Learning Outcome:**
This task helped me understand the importance of maintaining a digital portfolio. It also introduced me to platforms that are essential for career growth in technology and data science.

---

### 🔹 Task 3: Coding and Data Collection

**Objective:**
To develop problem-solving and data handling skills.

**Work Done:**

#### 🔸 Coding

A beginner-level problem was solved on CodeChef involving input and output operations.

#### 🔸 Data Collection

A Google Form titled **"Digital Literacy Awareness Quiz"** was created with 5 questions.

Responses were collected and analyzed using Google Sheets.

---

### 🔹 Task 4: Professional Communication

**Objective:**
To understand effective communication in digital platforms.

**Work Done:**

- Learned email writing structure
- Created a checklist for professional communication

**Key Points:**

- Clear subject line
- Proper greeting
- Formal tone
- Concise message

**Learning Outcome:**
This task improved my ability to communicate professionally and avoid common mistakes in digital communication.

---

### 🔹 Task 5: Cyber Safety Awareness

**Objective:**
To understand cyber threats and prevention methods.

**Work Done:**
Research was conducted on cybercrime, especially UPI fraud.

**Key Learnings:**

- Never share OTP or PIN
- Verify payment requests
- Avoid suspicious links

**Learning Outcome:**
This task increased my awareness of online threats and encouraged responsible digital behavior.

---

- **Conclusion**

This project provided practical exposure to digital tools, communication methods, and cyber safety practices. It helped in developing both technical and professional skills. The knowledge gained will be useful in academic activities and future career development in the field of data science and technology.
